Planned electricity supply upgrade – Stanmore
Low-voltage underground CONSAC Cable Replacement Project

Dear Resident/Business owner,

As part of Ausgrid’s capital works program, Ausgrid is replacing the existing low-voltage underground cables in **Stanmore**. These cables provide electricity to the local homes and businesses in the area.

The cables have reached the end of their serviceable life and will be replaced to enable Ausgrid to maintain a safe and reliable electricity network.

What to expect during the work?

This work will be completed in multiple stages throughout June & July 2023, weather and ground conditions permitting. Please see overleaf for map of work areas.

- There will be an increase in truck and vehicle movements in and around the worksite, with a variety of different machines being used as part of this work.
- To ensure the safety of the community, we will place steel plates over the open trenches when work is not taking place.
- We will use lights in the work area but will direct them away from nearby properties.
- There will be temporary changes to traffic where we are working. we will use traffic controllers to guide drivers and pedestrians around the work area.
- There will also be temporary parking restrictions in place so that we can carry out our work safely. We will start reserving parking spaces in the area with signage prior to our work.

As part of this work, power outages will take place. The customers directly impacted by power outages will receive an outage notification letter four (4) clear business days prior, confirming the outage details.

Construction hours

Ausgrid standard operating hours are **7am to 6pm, Monday to Friday**, and **8am to 1pm** on Saturdays. Works will take place during normal hours unless otherwise stated below.
